

Refinishing in a **New Dimension.**

4 Dimensions of **Hi-TEC**

Advantages that really impact

1. Hi-TEC:

• **Hi-Performance All-Rounder**

- Excellent across all conditions and applications
- Greater flexibility for interior, multi-stage and multi-colour finishes
- Highly reliable results thanks to Hi-TEC's uniform effect
- Unparalleled capability – no job too hard
- All-round progressive Hybrid System

2. Hi-TEC:

• **Driven by Technology**

- Connected to all technology
- The most advanced E-connectivity
- Latest evolution of colour technology
- Leading digital age training and advice

3. Hi-TEC:

• Safer and Cleaner

- Get the environmental edge
- Water based system
- Safe solution – limit solvent use
- Low impact, Hybrid System technology
- Easy clean

4. Hi-TEC:

• Quick and Easy Processing

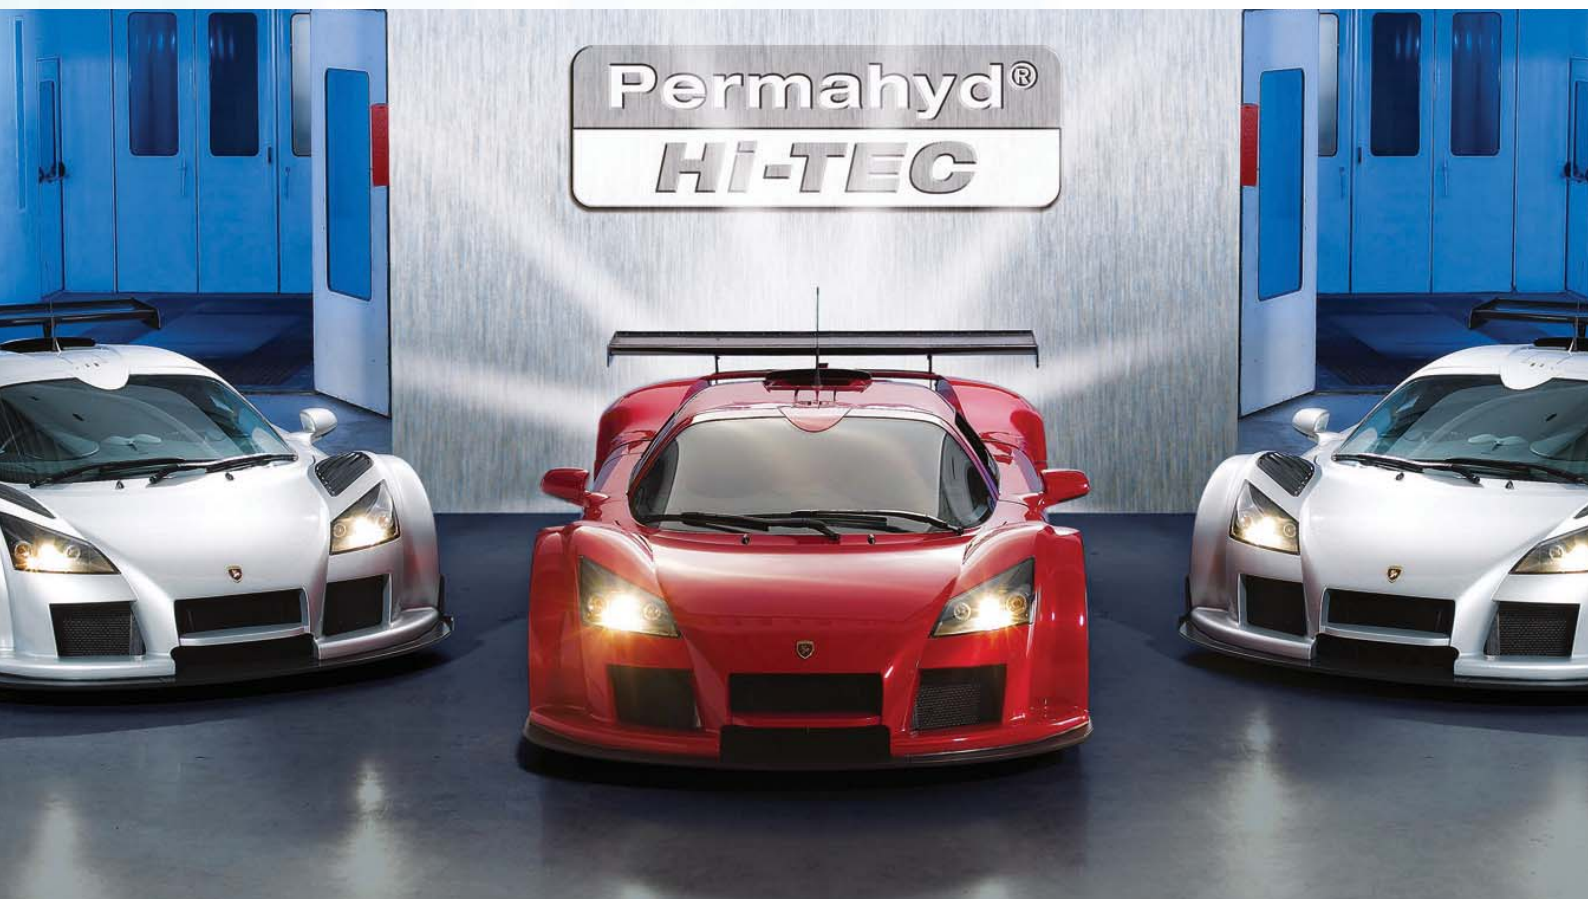

- Easy to apply and achieves excellent surface wetting
- Simple and reliable blending-in
- Short process time – only 1.5 coats without flash-off between coats

Permahyd®
HI-TEC

Your future **starts now!**

Hi-TEC – the new Spies Hecker waterborne basecoat 480.

Your work revolves around the basecoat system. It gives optimal support to your work process if it is simple and reliable to apply. In this connection, Permahyd® Hi-TEC 480 from Spies Hecker marks a breakthrough in the refinishing sector. Permahyd® Hi-TEC Series 480 sets new standards of ease of processing, high process security and more flexible application. Benefits that will impress all refinishers using it for the first time.

Hi-TEC is progress.

Permahyd® Hi-TEC combines the knowledge from our research and development departments with the experience of our technicians from over 50 countries. The new Permahyd® Hi-TEC system is based on a totally new, patented hybrid technology. Its pioneering mixing colours create an exceptionally uniform effect. Thanks to their high pigmentation, they achieve extremely high opacity. What's more, Hi-TEC can be mixed with Permahyd® Hardener 3080, which proves highly beneficial for interior and multi-stage paintwork. The basecoat system is distinguished by its very simple processing. When adjusting the material's viscosity, a specially developed additive helps to optimize spraying characteristics.

Hi-TEC is the Hybrid System.

Permahyd® Hi-TEC's unique Hybrid System caters for the advanced user whose collision repair facility is driven by technology and requires outstanding results in all conditions.

“Incredible how easy Permahyd® Hi-TEC is to apply and achieve great colour results.”

Hi-TEC. Latest in Colour Management

Measure the colour, search for the formula and mix the colour – Spies Hecker has the right tool for each work step. Everything is geared perfectly to Permahyd® Hi-TEC 480.

Acquire™ Spectrophotometer

The colour is analysed at the vehicle in a matter of seconds. Via 3 angles, the Acquire™ searches for the colour that matches best.

CRplus

The CRplus colour search program evaluates the electronically imported data and displays a colour formula in a matter of seconds. The new programme modules present a clear overview of quantities used, current stocks and orders, resulting in better control in the mixing room.

Workshop Poster

For rapid familiarisation with Permahyd® Hi-TEC there are various practical posters that neatly present each work step.
