

Ducted Turbine Sanding System

FEATURES - Turbine Sanding System

- Powerful extraction
- Auto stop/start
- Easy clean filter
- Reverse pulse filter clean
- Super quiet operating
- Micro dust particles
- Exhausted throughout
- Ergonomic power and air connection
- Wall plate with hose
- Hangers and services

The Lowbake solution for the ultimate in high efficient dry sanding operations is to install a dedicated Turbine Ducted Sanding Station. These units can be installed in a shop, dedicated work bays or preparation areas. They provide easy access to sanders and services without time wasted in searching for equipment or power.

Each system is engineered to accommodate a variety of tools and processes. These stations give the user more freedom, enabling the equipment operator to maneuver around difficult areas. The system has a single turbine with reverse pulse air filter cleaning for ease of maintenance.
